U UniManage Admissions CRM

SYSTEM GUIDE · WORKFLOW · ARCHITECTURE
Student inquiry se university admission tak

UniManage Admissions CRM ko kaise chalana hai, lead ka flow kya hai, aur system ke andar kaun sa hissa kis kaam aata hai — iska simple guide.

Counseling team · Admin · University records
6 stages — Inquiry se enrollment tak pipeline

2 work roles — Admin aur counselor (Faculty)

1 timeline — Har call, message aur counseling note

Is guide mein:
daily workflow, screens, user permissions, database structure, setup, testing aur common errors ke solutions.
Project: CodeIgniter 4 · PHP 8.2+ · MySQL · Document version: 28 October 2026

01 · System ka basic flow
Lead ka safar

Student pehli baar inquiry karta hai. Team uski need samajhti hai, sahi university/program suggest karti hai, aur application/enrollment tak follow-up karti hai.

New: Nayi inquiry → Contacted: Pehli baat → Counseling: Options samjhana → Application: Apply karna → Enrolled: Admission confirm → Lost: Aage nahi badha

Team ka har step

1. Lead aaya — website, referral, social, walk-in ya education fair se.
2. Naam/phone aur jo study details maloom hon, record karo.
3. Lead kisi counselor ko assign karo; next follow-up ki date set karo.
4. Student se baat ke baad profile timeline mein update likho.
5. Progress ke hisaab se stage update karo; agla reminder bhoolo mat.

CRM kya sambhalta hai?

- Har inquiry ki ek searchable profile.
- Counselor ownership aur student preferences.
- Upcoming aur overdue follow-up ki list.
- Stage change aur conversation history.
- Dashboard par pipeline counts aur recent leads.

Daily use ka seedha tareeqa

Subah

Dashboard par overdue aur aaj ke follow-ups dekho. Apni lead list filter karo.

Har conversation ke baad

Call/email/WhatsApp/counseling ka chhota, useful note timeline mein likho.

Din ke aakhir mein

Stage aur next follow-up check karo. Kisi active lead ko bina next action mat chhodo.

NOTE: Yaad rakhein: Lead mein email, city aur course preference optional hain. Pehli call se pehle jo details nahi milin, unki wajah se inquiry save karna na rokein.

02 · Screen-by-screen istemal

App ko kaise chalayein

Login ke baad admin aur counselor ko admissions workspace dikhta hai.

1. Login aur overview

Team account se sign in karein. Dashboard par total leads, new inquiries, counseling mein leads, applications, enrolled students aur overdue reminders ka count hota hai. Neeche follow-up queue aur recently added leads dekhein.

/login
→
/dashboard

2. Lead add karna

Add a lead par click karke required student name aur phone bharein. Email, city/country, study level, program, preferred university, intake aur counselor notes optional hain. Lead source, pipeline stage, counselor aur follow-up choose karke save karein.

Lead source: Website · Referral · Social · Walk-in · Education fair · Other

/leads/create
→ save ke baad student profile

3. Lead dhoondhna / filter karna

Leads list mein naam, phone, email, program ya university se search karein. Stage, source aur assigned counselor ke filters ek saath use kar sakte hain. Student row se poori profile khulti hai.

/leads

4. Profile, update aur timeline

Profile par phone/email, study interest, intake, source, current counselor aur next follow-up dekhein. Edit lead se stage, ownership, preferences aur reminder badlein. Timeline mein Call, Email, WhatsApp, Counseling, Application ya Other type ke saath note add karein.

/leads/profile/{id}
.
/leads/edit/{id}

5. Stage kab badlein?

New → Contacted: student se pehli baar baat/message ho gaya.

Contacted → Counseling: student ke goals/eligibility par guidance shuru ho gayi.

Counseling → Application: student ne application process shuru kar diya.

Application → Enrolled: university admission confirm hai.

Kisi bhi active stage → Lost: student aage nahi badh raha; context note karein.

Stage change profile timeline mein record hota hai.

NOTE: Reminder: Follow-up date/time set karna reminder queue ko kaam ka banata hai. CRM reminder dikhata hai; email/WhatsApp notification khud se send nahi karta.

03 · Roles, modules aur permissions
Kaun kya kar sakta hai

Admin aur counselor admissions workflow sambhalte hain. Baaki roles existing university records modules ke liye rakhe gaye hain.

Role | Admissions CRM | Existing university areas

Admin | Leads dekhna, banana, edit, assign, timeline update | Students, departments, courses, subjects, faculty, attendance, timetable

Faculty / Counselor | Leads dekhna, banana, edit, timeline update; assignment options mein faculty/admin accounts | Academic records, faculty list, attendance aur timetable access (route ke mutabik)

Student | Admissions pipeline access nahi | Student profile ki limited route access

Accountant | Admissions pipeline access nahi | Student directory access

NOTE: Security: login session + role filters ke peeche protected routes hain. Forms par CSRF protection hai. Mutating actions POST use karte hain; student status change aur logout GET link nahi hain.

Workspace screens

Admissions workspace

/dashboard — real database metrics + follow-up list

/leads — search, filters, pipeline overview

/leads/create — nayi inquiry

/leads/profile/{id} — detail + activity timeline

/leads/edit/{id} — stage, owner aur next step

University records

Students, departments, courses, subjects, faculty, attendance report/logs aur class timetable existing modules mein hain.

Role se route protection

Admin/counselor ke CRM route par auth + role filters. Admin-only academic writes, jaise department/course/subject create aur faculty create.

Data privacy

Student name/contact aur counselor notes sensitive operational data hain. Har counselor ko apne kaam ke liye zaroori access hi dein. Shared/demo account ki jagah alag staff accounts banayein.

Lead form ke fields

Required fields: student_name · phone · Source · Stage · Counselor · Follow-up

Optional fields: email · City / Country · Study level · Program · University · Intake · Notes

04 · Application ka internal structure
System ke andar ka map

CodeIgniter MVC pattern: route request ko controller tak bhejta hai, model database se baat karta hai, aur view browser screen banata hai.

Browser / UI — Dashboard · Leads · Profile

↓

Routes + Filters — Auth · Role · CSRF

↓

Controllers — Dashboard · Leads · Attendance · Academic modules

↓

Models — LeadModel · LeadActivityModel · UserModel ↔ MySQL — Validation · Transactions · Audit log

↓

Views — HTML screens · shared layout · responsive navigation

Layer	Project location	Kaam
Routes	app/Config/Routes.php	URL, HTTP method aur role access
Controllers	app/Controllers/	Request validation, workflow aur response
Models	app/Models/	Lead queries, dashboard counts, activity history
Views	app/Views/	Dashboard, forms, list, profile, shared layout
Schema	app/Database/Migrations/	Versioned database tables and relations
Roles/seed	app/Database/Seeds/	Initial demo roles, users, academic reference data

CRM database

Table	Important fields	Relation
admissions_leads	student_name, email, phone, country/city, program, university, intake, source, status, assigned_to, created_by, next_follow_up, notes, timestamps, deleted_at	assigned_to / created_by → users.id
lead_activities	lead_id, user_id, activity_type, details, created_at	lead_id → admissions_leads.id; user_id → users.id
users / roles	Staff account, email, status, role	Lead counselor aur activity author identify karte hain

NOTE: Implementation note: Enrolled students ke liye existing students record module alag hai. CRM lead ko enrolled student table mein convert karne ka automated handoff abhi roadmap mein hai.

05 · Install, run aur troubleshoot

Setup checklist

Pehli baar chala rahe hain to in steps ko isi order mein follow karein.

Requirements

- PHP 8.2 ya newer; project Composer/CodeIgniter 4 use karta hai.
- PHP extensions: intl, mbstring, MySQLi (MySQL use karte waqt).
- MySQL service on ho aur `.env` mein database connection sahi ho.
- Apache use karte waqt web root project ke `public/` folder par point kare.

Local development

```
# 1. Project root mein env file copy karke values set karein
cp env .env

# 2. .env mein app.baseURL aur database.default.* set karein
# 3. Database pehle create karein
php spark migrate
php spark db:seed InitialSeeder

# 4. Local server
php spark serve --host 127.0.0.1 --port 8080

# 5. Browser
http://localhost:8080/
```

Is workspace ki current status

CRM schema configured MySQL database par migrate ho chuki hai. Local PHP CLI 8.5 par app verify hua. XAMPP Apache PHP 8.0.28 chala raha hai; CodeIgniter 4.7.5 ke liye PHP 8.2+ chahiye. Isliye XAMPP se chalane ke liye Apache PHP upgrade karein, ya development ke liye upar diya `php spark serve` command use karein.

Common issue → kya karein

Message / problem	Solution
“PHP 8.2 or higher” / HTTP 503	Active PHP check karein: terminal mein php -v; XAMPP Apache ka PHP version bhi 8.2+ hona chahiye.
“admissions_leads doesn't exist”	Sahi `.env` database select karke `php spark migrate` run karein; `php spark migrate:status` se check karein.
Page login par redirect / DB connect error	MySQL start karein; `.env` host, database, user, password/port check karein. Secrets ko source control mein save na karein.
Wrong host/port ya redirect	Browser URL ko `.env` `app.baseURL` se match karein (scheme, host, port). Pretty URLs ke liye `indexPage` empty aur rewrite enabled ho.
Apache par route not found	`public/` document root, `mod_rewrite`, `AllowOverride All` aur `public/.htaccess` verify karein.
Login successful, dashboard error	Database migrated ho aur admin/counselor user exist karta ho. Error details `writable/logs/` mein dekhein.

NOTE: Demo users: `InitialSeeder` sample accounts banata hai. Deployment se pehle passwords badlein; sample credentials public/production mein use na karein.

06 · Abhi kya hai aur agla kya
Project ki current boundaries

Yeh guide current application ke implemented flow ko document karti hai; roadmap features ko available feature samajh kar plan na karein.

Abhi available

- Admin/counselor authenticated admissions CRM.
- Lead intake, edit, search aur stage/source/owner filters.
- Counselor assignment aur student preference fields.
- Follow-up date/time, overdue dashboard count aur queue.
- Lead profile, stage-change history aur activity timeline.
- Dashboard, responsive navigation aur existing academic screens.
- Lead soft delete schema, CSRF protected forms, audit logging.

Abhi included nahi

- Partner universities/programs ka searchable catalog.
- Public website form ya external CRM lead API.
- CSV lead import, deduplication aur campaign attribution.
- Automatic WhatsApp/email reminders.
- Application documents/checklists aur deadlines.
- Enrolled lead se student record ka automatic conversion.
- Advanced counselor conversion/response-time analytics.

Recommended build order

Phase A — Team setup:
Individual staff accounts, secure password reset/change, role assignment aur counselor workload controls.
Phase B — University catalog:
Partner university, location, program, eligibility, fee, intake aur deadline records; counselor ko verified options dikhana.
Phase C — Intake:
Website form / approved import, consent, spam checks, duplicate detection aur source attribution.
Phase D — Application:
Document checklist, application milestones/deadlines, status reporting aur enrolled lead ka student record se safe linkage.
Phase E — Automation & analytics:
Approved email/WhatsApp provider integration, scheduled reminders, delivery logs aur conversion reporting.
NOTE: Operational recommendation: Production se pehle real backup/restore test, private credentials, HTTPS, staff training, privacy/consent process aur admission-stage definitions approve karein.

Guide codebase ke current routes, screens, migrations aur setup instructions ke mutabik likhi gayi hai. UI label translation aur deployment details server configuration ke hisaab se badal sakte hain.
